Powerful web based call accounting software for a fraction of the cost!

Call Accounting Mate is truly your best friend for call management. Whether you are sitting at your office desk or traveling around the world, Call Accounting Mate can be at your disposal. The unique fully web based interface allows you to access the software by pointing your browser to the computer IP address. You can perform administrator tasks, assign user privileges and run reports all from any remote system equipped with connectivity.

The software will work with any telephony call detail records or import communication records. New data is easily adapted using an integrated scripting tool.

Rates and tariffs can easily be applied or modified for any country in the world through our intuitive costing algorithm. Rate files can be imported and exported across multiple systems.

Call Accounting Mate is the most dynamic browser-based communications management solution available and can be implemented on a host of telephone switches (inc. Key, PBX and IP Servers). Data collection can be received from many sources including telnet, serial, file, ODBC, tcp/udp, MySQL/Asterisk and many other formats.

The software collection module can run as a service and eliminates the need for a buffer box. The built-in web server provides full browser implementation without the need for complex industry web servers like IIS and Apache. The internal web server can run on any acceptable port.

Works with virtually all major manufacturers

Our library of drivers includes all major manufacturers including Asterisk, Cisco, Avaya/Nortel, Siemens, Mitel, Alcatel, 3COM, Samsung, Panasonic, Toshiba, Telrad and many more. In fact, if we do not have your driver listed we can easily create one using our scripting language.

Comprehensive reporting tools

Whether you want detail, summary, and graph reports, Call Accounting Mate can provide them without any special training. Call Accounting Mate can monitor incoming and outgoing calls in real time. Alarms and reports can be scheduled for emergency 911 notification, toll fraud or misuse reporting. A built-in contacts database can be used to quickly identify all calls made to / from a particular contact and tagged as personal or business related.
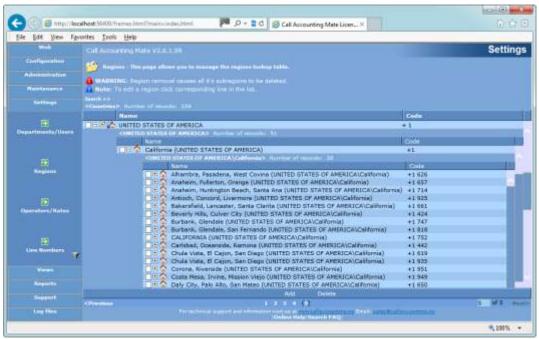

Intuitive and comprehensive reporting solution

Call Accounting Mate installs quickly and easily. The integrated installation wizard asks a few basic questions then proceeds to configure the application in seconds. For the novice user, Call Accounting Mate comes with informative online help that can be accessed at the click of a button, providing easy-to-understand examples about the current task.

Can be deployed in any industry segment

Call Accounting Mate is an industrial strength, fast and reliable call accounting software package. Call Accounting Mate can be deployed in virtually any enterprise including retail, government agencies, brokers, professional firms, banks, hospitals and universities. Telecom mangers find it increasingly difficult to allocate telecom costs to various departments or cost centers or individuals. This solution will pinpoint charges, highlight misuse and increase productivity.

Call Accounting Mate is the world's most popular try and buy call accounting software. The software sports a 100% browser interface, an embedded SQL database engine and an integrated web server. Call Accounting Mate provides a flexible call costing engine for any carrier tariffs. It can be deployed anywhere in the world!
